Healthcare Specimen Collection Solution

Seeking an improved point-of-care data-collection solution for healthcare? Ingram Micro has just what the doctor ordered.

Improved Point-of-Care Data Collection for Healthcare

With the explosive growth of new medications, today's healthcare environment is more complex than ever before. As a result, medical errors are one of the industry's largest safety gaps.

To help your healthcare customers overcome this challenge, Ingram Micro offers a complete point-of-care and electronic medical-record management system that uses bar-code and mobile printing technology to monitor bedside medication administration.

From the patient's bedside to the lab, our easy-to-use specimen collection solution can help reduce medical errors and streamline data capture and storage processes.

Increased Bedside Data Capture Accuracy

Using our complete healthcare specimen collection solution, you can help safeguard your customer's medical staff against potential common errors.

By passing patient and drug information through a preventive software, our solution provides accurate patient data, right down to the drug's unit-dose level, including the National Drug Code (NDC) number, and meets Computerized Physician Order Entry (CPOE) standards for prescriber-error prevention.

With Ingram Micro's Point-of-Care Solution you can:

- Track and manage samples in the lab during testing and diagnostic phases by bar coding vials, Petri dishes, slides and more
- Reduce specimen identification and tracking errors
- Improve accuracy of patient drug administration

- Provide your customer's medical staff with easy access to current patient information
- Increase lab work data accuracy
- Simplify HIPAA compliance
- Capture and print required patient signatures instantly
- Gain solutions for bin and inventory management
- Improve patient billing accuracy with improved tracking of consumables
- Save customers' money and streamline their supply chains

Ingram Micro's Healthcare Specimen Collection Solution Components

- Honeywell's Dolphin 9900hc is the first mobile computing solution available with disinfectant-ready housing. With maximum reliability and bedside ease-of-use, the Dolphin features point-and-shoot bar-code reading and extended battery power for full-workday usage — without recharging.
- Zebra's QL 220 Plus is a compact, lightweight thermal mobile printer that helps dramatically reduce labeling errors by allowing clinicians to immediately label blood or specimen draws at the bedside. With advanced, secure wireless connectivity and long battery life, the QL 220 is easy for nurses and phlebotomists to carry to the point of care via a belt clip, shoulder strap or cart.
