

LogicPOS

Distributed POS System

LB3000 Bundle

LogicPOS Hardware Solution

LogicPOS is a total POS hardware solution comprised of market leading components. With all key components manufactured by Logic Controls, the system offers top reliability and functionality in a harmonious stylish design. Single source peripherals also mean maximum interface compatibility with unparalleled single point of hardware service and support. Best of all, the Logic Controls bundle solutions are offered at prices that make them affordable for even small retailers.

- Single source components to assure interface compatibility and uniform style appearance
- Fanless, reliable, and compact industrial computer
- Heavy duty cash drawer
- Programmable QWERTY keyboard
- Bright VFD customer pole display
- Integrated magnetic stripe reader
- 15" TFT LCD monitor

Retail Hardened Computer

The most important component in any POS system is the computer. Unlike the standard PCs used in most POS systems, the industrial computer (LC8200) used in LogicPOS is specifically designed for maximum performance and reliability operating in demanding retail and hospitality environments. The fanless design of the LC8200 offers noise-free operation and prevents damage to internal components caused by dust, grease, and other external contaminants.

To enhance reliability further, LC8200 eliminated all internal moving parts and plug-in cables (CF configuration). LC8200 is enclosed in an ultra compact rugged die cast case with no ventilation slots and holes. The unit supports multiple mounting options that include vertical and horizontal mounting positions on table, wall, or ceiling. LC8200 features a large compliment of POS I/O ports and runs XP PRO, XPE, WePOS, Vista, Linux, CE, and DOS operating systems.

LogicPOS Peripherals

Logic Controls has developed an industry reputation for producing POS peripherals with superior reliability and advanced functionality. LogicPOS features the high-end Logic Controls peripherals that include the industry's #1 leading VFD customer display, a heavy duty cash drawer, an advanced programmable POS keyboard integrated with a 2-track MSR, and a 15" TFT LCD monitor. Additional certified peripherals include a Citizen receipt printer and a Metrologic bar code scanner.
